CHECKOUT PROMPTS

BUILD YOUR OWN POP-UP CHECKOUT

The exact prompts to build a Shopify pop-up checkout like mine on mahekh.in: the COD order in one pop-up, a WhatsApp message on abandoned checkouts, optional OTP, and no checkout app to pay every month.

WHAT YOU'LL BUILD

- 👉 **A pop-up checkout on the product page:** pack, payment, name, mobile, address and pincode in one sheet. The buyer never leaves the page.
- 👉 **Real Shopify orders:** every COD order lands in Shopify admin → Orders like a normal order, so your shipping app keeps working.
- 👉 **Abandoned checkout → WhatsApp:** if someone types their number but doesn't confirm, an automatic WhatsApp message brings them back.
- 👉 **Optional OTP:** switch a one-time code on or off from one setting.
- 👉 **No checkout app bill:** no monthly fee for a COD form app like Releasit or EasySell. Meta charges per WhatsApp template message (see Meta's pricing page), and Cloudflare's free plan is usually enough for a small store.

WHAT YOU NEED

- 👉 Your **Shopify admin** (owner, or staff with apps and themes access).
- 👉 An AI that works on a folder: **Claude** (Claude Code or the desktop app), **Antigravity**, **Cursor** or **Codex**. You don't write code: you paste the prompts and answer its questions.
- 👉 A free **Cloudflare** account (the small backend that creates orders and sends WhatsApp messages).
- 👉 For WhatsApp: a **Meta Business portfolio** and a phone number for the WhatsApp Business Platform (Step 3).
- 👉 **Safety first:** Online Store → Themes → ... → **Duplicate** your live theme and let the AI work only on the copy.

STEP 1: PASTE THE BUILD PROMPT

👉 Open your AI, connect it to your store's theme (Shopify CLI) or give it the downloaded theme folder, and paste this. Fill in the MY STORE lines first.

👉

```
You are a senior Shopify developer (Online Store themes, Liquid, the Shopify Admin
GraphQL API and Cloudflare Workers). Build me my own pop-up checkout for Cash on
Delivery orders, like the one on mahekh.in.

MY STORE (fill this in, or ask me before you start)
- Store address: ____.myshopify.com
- Theme: work on a DUPLICATE of my live theme, never the live one
- Prepaid offer: ____ (example: "Pay online and save ₹___") or "no prepaid option"
- Brand colours and fonts: ____

A. THE POP-UP (theme section + snippet, no app)
- On the product page, the "BUY NOW · CASH ON DELIVERY" button opens a bottom-sheet
pop-up instead of Shopify's checkout.
- Inside: product image and name, pack/variant picker, payment choice (Cash on
Delivery, and Pay Online if I want it), full name, mobile number with the India
country code, house/street/area, pincode, city, state, landmark (optional), and a
summary (item total, delivery, to pay).
- Pincode fills city and state by itself. Mobile number must be ten digits.
Friendly error messages, a sticky CONFIRM ORDER button, fast on mobile.
- CONFIRM ORDER shows "Placing your order…", then an "Order Confirmed!" screen with
the order number.
- Add a ticked-by-default checkbox: "Send me order updates on WhatsApp".

B. THE BACKEND (a small Cloudflare Worker, free plan)
- The pop-up sends the form to my Worker. The Worker checks it and creates the
order in Shopify with the Admin API: payment pending, gateway "Cash on Delivery",
tags "custom-checkout" and "COD", the right variant, price, discount and shipping.
- Every secret (Shopify token, later the WhatsApp token) lives in Worker secrets.
Nothing secret goes into the theme.
- Protection: rate limit per phone number and IP, block duplicate orders made
within a few minutes, refuse fake pincodes.
- Pay Online (only if I want it): send the buyer to Shopify's normal checkout for
that variant with my prepaid discount, so payments stay with Shopify.

C. SHOPIFY ACCESS
- Tell me exactly which Admin API scopes you need (for example write_orders and
read_products) and walk me through creating the app in Shopify's Dev Dashboard and
installing it on my store. I'll give you the Client ID and Client secret here in
chat; save them as Worker secrets.

HOW TO WORK
- First read my theme and tell me your plan in short points. Wait for my "go".
- Then build on the duplicate theme, deploy the Worker and give me the preview
link.
```

```
- Place one test COD order yourself, show it to me in Shopify admin → Orders, then
cancel it.
- Only when I say "publish", tell me how to publish the theme.
```

👉 When it asks for Shopify access, it will guide you through Shopify's **Dev Dashboard**: create the app, add the scopes it names, install it on your store, then give the **Client ID** and **Client secret** to the AI in chat.

▪ STEP 2: TEST IT BEFORE BUYERS SEE IT

👉 Open the **preview** of the duplicate theme on your phone and place a test COD order.

👉 Check Shopify admin → **Orders**: the order, the address and the tags must be right. Then cancel the test order.

👉 Happy with it? Tell the AI **"publish"**, or publish the duplicate theme yourself from Online Store → Themes.

▪ STEP 3: CONNECT THE WHATSAPP API (DO THIS YOURSELF)

👉 **Create the app:** developers.facebook.com/apps → Create app → choose the WhatsApp use case (connect with customers through WhatsApp) → link your Meta Business portfolio.

👉 **Add your number:** in the app open WhatsApp → **API Setup** → Add phone number → verify it with the code. Note the **Phone number ID** and **WhatsApp Business Account ID**. A number that is active on the normal WhatsApp or WhatsApp Business app can't be added as it is: use a new number, or remove it from the app first.

👉 **Add a payment method** in WhatsApp Manager, because Meta bills business-started messages.

👉 **Permanent token:** Business Settings → Users → **System users** → Add (Admin) → Assign assets: your app and your WhatsApp account (full control) → **Generate token** with **whatsapp_business_messaging** and **whatsapp_business_management**. The token on the API Setup page expires, so don't use that one.

👉 **Templates:** WhatsApp Manager → Message templates → create **abandoned_checkout** (Marketing): *"Hi {{customer_name}}, you left {{product_name}} in your checkout. Tap below to finish your order."* with a **Complete order** link button. For OTP on WhatsApp, also create an **Authentication** template with a copy-code button. Wait until both show **Approved**.

👉 **Rules:** message only buyers who ticked the WhatsApp checkbox, and outside the buyer's last-message window only approved templates can be sent.

👉 Then paste this to your AI and give it the two IDs and the token in chat:

👉

```
Connect my custom checkout to the WhatsApp Business Platform (Cloud API) by Meta.

I'll give you here in chat: my Phone number ID, my WhatsApp Business Account ID and
a permanent System User token. Save them only as Worker secrets.

Then:
- Write a small sendTemplate() helper in my Worker that calls the Cloud API
messages endpoint on graph.facebook.com (use the current Graph API version from
Meta's docs) with an approved template and named parameters.
- Send one test message with my template "abandoned_checkout" to my own number and
show me the API response.
- If it fails, read the error code, tell me in simple words what to fix in Meta
(number, template, token or payment method), and try again.
- Never log or print the token.
```

👉 New to WhatsApp Business? My other guide sets up the free AI agent inside the WhatsApp Business app: WhatsApp Business AI setup guide.

▪ STEP 4: ABANDONED CHECKOUT + OPTIONAL OTP

👉 Once the test message from Step 3 reaches your phone, paste this:

👉

```
Now add two features to my pop-up checkout.

ABANDONED CHECKOUT ON WHATSAPP
- When a buyer has typed a valid mobile number and the WhatsApp checkbox is ticked, save a draft checkout in the Worker (Cloudflare KV or D1): name, mobile, product, variant, price and time.
- If no order is confirmed within ___ minutes (suggest a good default, I'll choose), send my "abandoned_checkout" template with the buyer's name, the product name and a link that reopens the pop-up with their details already filled.
- Send it only once per checkout, never to someone who already ordered, never without the opt-in. Use a Cron Trigger for the timer.
- Give me a simple daily count: abandoned, messaged, recovered.

OPTIONAL OTP
- Add a setting OTP_REQUIRED (on/off) in the Worker. When it's on, CONFIRM ORDER first sends a one-time code to the buyer's WhatsApp with my approved authentication template, and the order is created only after the right code.
- Limit the retries and let the code expire after a few minutes.

Test both on the duplicate theme with my own number before going live.
```

▪ WANT MORE ON AUTOPILOT?

👉 My course **Meta Ads Autopilot with AI** connects Meta Ads, Shopify and Shiprocket to Claude or Antigravity, so your reports, orders and RTO checks run with one message: open the course.

👉 WhatsApp Business AI (free, inside the app): setup guide.

⚡ ACTION CHECKLIST

- ✓ Built on a duplicate theme; the live theme stayed untouched until you published
- ✓ A test COD order showed up in Shopify admin → Orders (then cancelled)
- ✓ Shopify and WhatsApp secrets live only in Worker secrets, never in the theme
- ✓ WhatsApp number verified, payment method added, templates approved
- ✓ WhatsApp opt-in checkbox is on the pop-up
- ✓ Abandoned-checkout message tested on your own number
- ✓ OTP tested with the switch on and off

KEY TAKEAWAY

Your checkout, your data, your rules. The pop-up keeps buyers on the product page, WhatsApp brings back the ones who leave, and there's no checkout app bill every month.
