SETUP GUIDE

CLAUDE × SHOPIFY: STEP-BY-STEP SETUP

Connect Claude to your Shopify store and run it by chatting. Route A is one click for most jobs. Route B adds order actions (flag, hold, edit).

BEFORE YOU START

👉 **You need:** a paid Claude plan, a Shopify store you own or manage, and a desktop browser for the setup.

👉 **Your permissions = Claude's permissions.** Claude can only see or change what your own Shopify staff account is allowed to.

👉 **Use only official tools.** Don't paste API tokens into random apps.

ROUTE A: ONE-CLICK CONNECTOR (REPORTS, PRODUCTS, SALES, DISCOUNTS)

👉 **Add the connector:** on desktop, open **claude.ai/directory/connectors/shopify** and add the Shopify connector to Claude.

👉 **Log in to Shopify:** Claude sends you to your Shopify admin. Review the access it asks for.

👉 **Pick the access level: read-only** (Claude can only look) or **write** (Claude can make changes). Start with read-only if you're unsure.

👉 **Confirm:** back in Claude, ask *"Which Shopify store is connected?"*

👉 **One store at a time:** to switch, ask Claude to connect another store, then start a new chat.

COPY-PASTE PROMPTS FOR ROUTE A

👉 "Show me yesterday's orders and revenue in Shopify, split by COD and prepaid."

👉 "Create a product in Shopify from this photo. Write the title, description and price, and keep it as a draft." Then: "Make it active."

👉 "In Shopify, put 20% off on every product in my Summer collection."

👉 "Create a 20% off discount code called DIWALI in Shopify."

👉 **Tip:** mention Shopify by name and keep one task per message.

▪ WHAT ROUTE A CAN'T DO (SHOPIFY BLOCKS IT)

- 👉 It **reads orders but can't change them**: no order edits, cancellations or refunds. Customer records are read-only too.
- 👉 No payments, taxes, domains, plan changes or live-theme edits.
- 👉 Discount codes are percentage-off only.

▪ ROUTE B: ORDER ACTIONS (FLAG, HOLD, EDIT) WITH CLAUDE CODE

- 👉 For order jobs (tag a fishy COD order, hold its shipment, change a size) use **Claude Code** + Shopify's official **AI Toolkit** + **Shopify CLI**. No code to write: Claude writes the queries.
- 👉 Install the toolkit in Claude Code: **claude plugin install shopify-ai-toolkit@claude-plugins-official**
- 👉 Install the Shopify CLI (guide: shopify.dev/docs/api/shopify-cli), then ask Claude Code: *"Connect to my Shopify store with the Shopify CLI so you can tag, hold and edit orders."* It runs **shopify store auth** and you approve the access in your browser.
- 👉 Then just ask: *"Tag order #___ as CALL-VERIFY and put its shipment on hold."* or *"Change the size on order #___ from M to L."*
- 👉 **Every change needs your OK:** store changes are off by default in **shopify store execute**, and Claude Code asks before it runs a command that changes your store.

⚡ ACTION CHECKLIST

- ✅ Paid Claude plan active
- ✅ Official Shopify connector added from Claude (no homemade API token)
- ✅ Started read-only, switched to write only when needed
- ✅ Order actions (tag, hold, edit) done through Claude Code + Shopify CLI, approving each change
- ✅ Refunds and cancellations done by you in Shopify admin
- ✅ Access removed by uninstalling the app in Shopify admin when you stop using it

💡 KEY TAKEAWAY

Start read-only, use only Shopify's official tools, and approve every change. Claude does the clicking, you stay in control.
